

Cetina

Color Reference

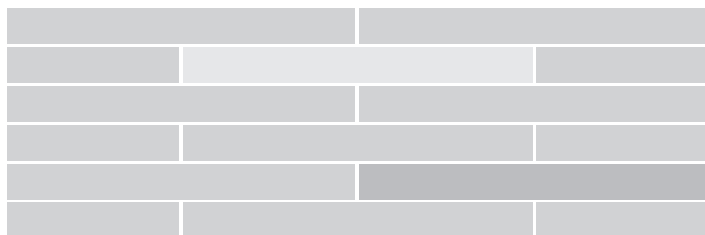

Wood is a natural material with inherent variations of color, grain, structure, and mineral components.

These natural variations respond to the color and texture treatments of the finishing process which results in a range of colors and tones around a central median color.

The images show the expected color variation for this particular product.

EXPECTED COLOR VARIATION: ECV2

Reference image of Cetina in Prime Light Grade. Samples of this product may not represent the full range of color variation. The image above is provided to show an overall colour impression and variation of tone.
